AI Use Log - Sami

User Stories: Code work for #7, #8, #13, and #21, plus non-functional requirements for User Stories 1 through 18.

Purpose of AI Use: To complete missing Sprint 2 code, add automated test coverage, and write simple non-functional requirements for all CareerConnect user stories.

Chat Link or Prompt/Response: Three prompts were used. The first requested the missing resume and application code. The second requested automated tests. The third requested simple and measurable non-functional requirements for User Stories 1 through 18. The prompts and generated answers are shown on the following pages.

AI Suggested Content: The AI suggested updates to app.js, generated six tests in tests/resume-application.test.js, and proposed performance, security, reliability, and usability requirements for every user story.

Validation: The complete project suite passed 47 tests: 35 registration tests and 6 resume-preview tests already existed, and 6 new resume-application tests were added. Each NFR was reviewed to make sure it described quality and used simple, measurable language.

Decision: Modified before use. The generated changes were adapted to the existing project structure and reviewed before being uploaded.

Reflection: The AI helped organize the missing code, tests, and NFRs, but I still reviewed the files, ran the complete test suite, and checked that every NFR matched its user story.

Responsible Person: Sami Fares

User Stories 7 and 8: Resume Upload and Replacement Implementation

Purpose of AI Use: To add the missing resume replacement flow and keep the existing upload behavior consistent with the user stories.

Chat Link or Prompt/Response: See screenshot.

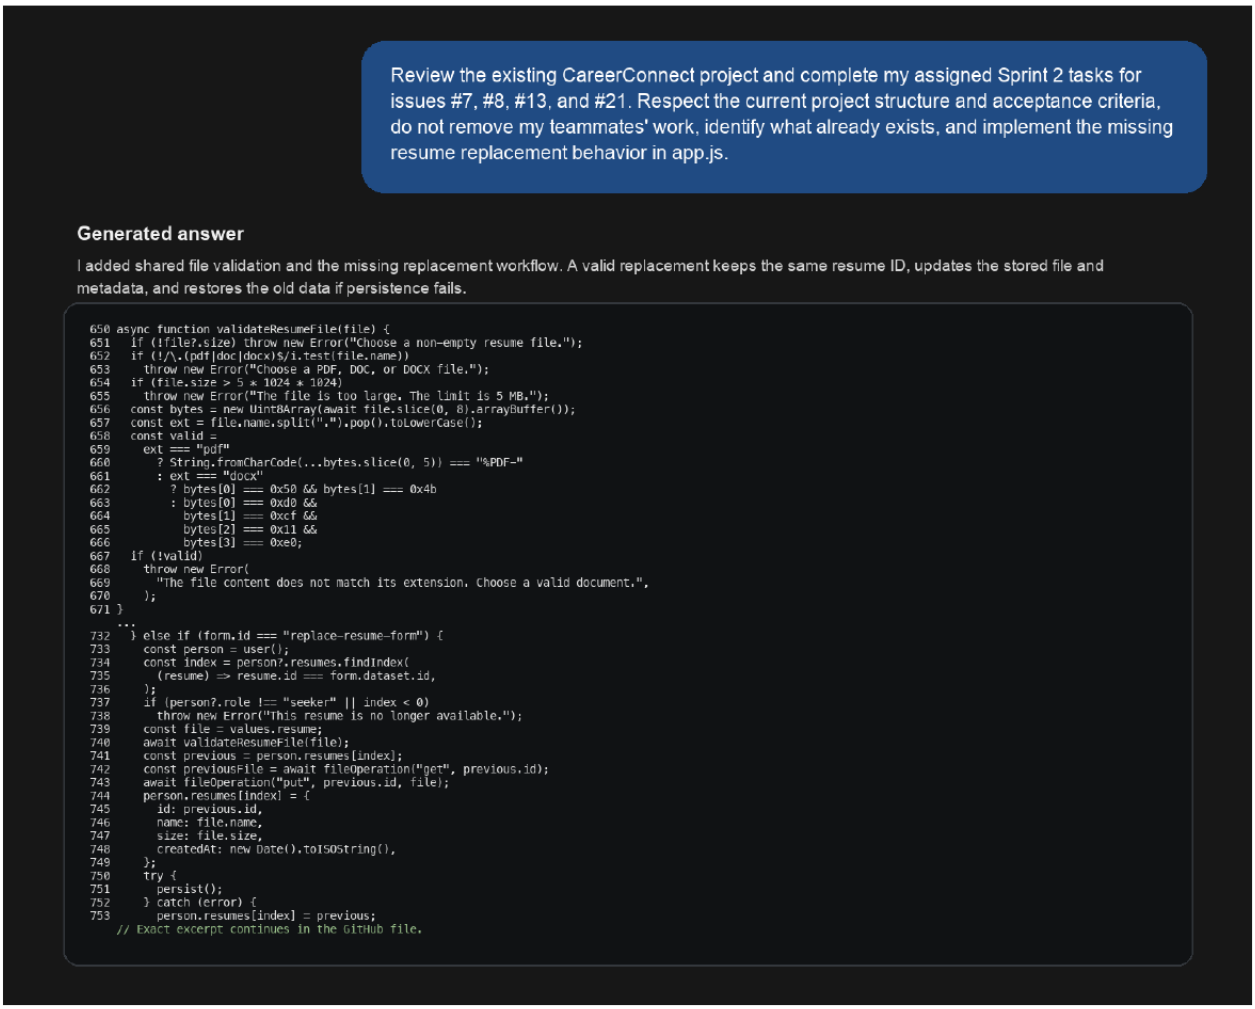

AI Suggested Content: The AI added shared resume validation, replacement using the same resume ID, updated file metadata, IndexedDB storage, and rollback protection if saving failed.

Validation: The changes in app.js were reviewed against the user stories and covered by the automated resume tests.

Decision: Modified before use.

Reflection: The response completed the missing replacement behavior while keeping the original profile and resume structure.

Responsible Person: Sami Fares

User Story 13: Application Resume Copy and Duplicate Prevention

Purpose of AI Use: To make job applications keep the selected resume copy and prevent the same user from applying to one job twice.

Chat Link or Prompt/Response: See screenshot.

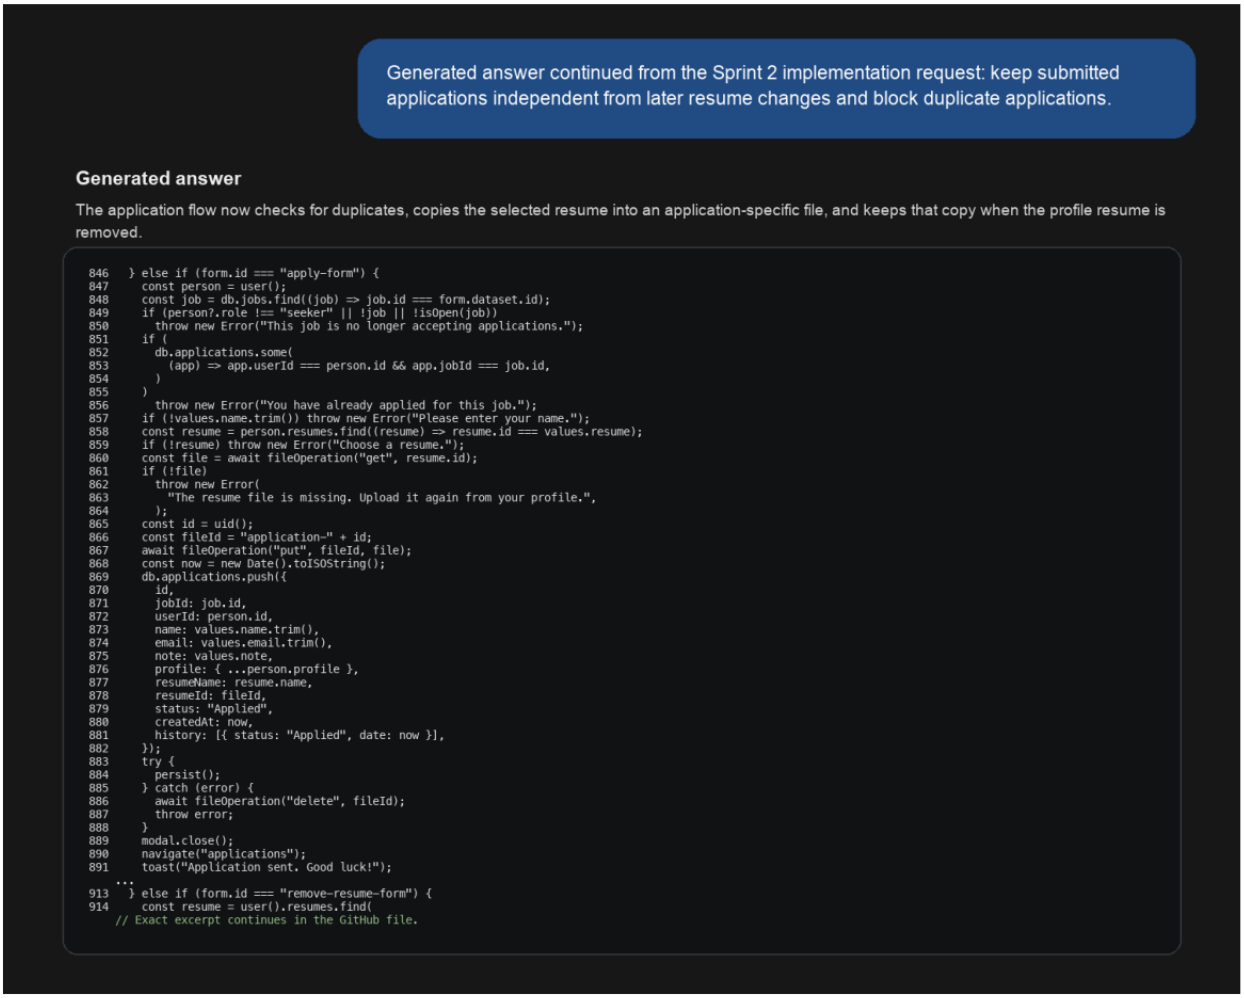

AI Suggested Content: The AI added a duplicate check, saved an application-specific resume file, kept the submitted copy after profile removal, and redirected successful submissions to My applications.

Validation: Automated tests confirmed successful submission, duplicate prevention, and preservation of the submitted resume copy after profile removal.

Decision: Accepted after review.

Reflection: The saved resume copy protects old applications when the user later replaces or removes the profile resume.

Responsible Person: Sami Fares

Task #21: Automated Resume Upload and Replacement Tests

Purpose of AI Use: To create repeatable tests for valid upload, invalid files, and replacement behavior.

Chat Link or Prompt/Response: See screenshot.

AI Suggested Content: The AI generated three tests that check PDF storage and metadata, reject unsupported or renamed files, and confirm that replacement keeps one resume entry with the latest file.

Validation: The test code was reviewed against the acceptance criteria and run as part of the complete project suite.

Decision: Accepted after review.

Reflection: These tests cover the main resume upload risks and make the behavior easier to verify after future changes.

Responsible Person: Sami Fares

Task #21 A.T.: Resume Removal and Successful Application Tests

Purpose of AI Use: To verify resume removal and confirm that a successful application stores its own resume copy.

Chat Link or Prompt/Response: See screenshot.

AI Suggested Content: The AI generated one removal test and one successful-application test. The tests check metadata, stored files, application status, navigation, and confirmation messages.

Validation: Both tests passed as part of the complete automated test suite.

Decision: Accepted.

Reflection: The tests confirmed that profile cleanup does not remove a resume that was already attached to an application.

Responsible Person: Sami Fares

Task #21 A.T.: Duplicate Application Restriction Test

Purpose of AI Use: To verify that the system rejects a second application from the same user for the same job.

Chat Link or Prompt/Response: See screenshot.

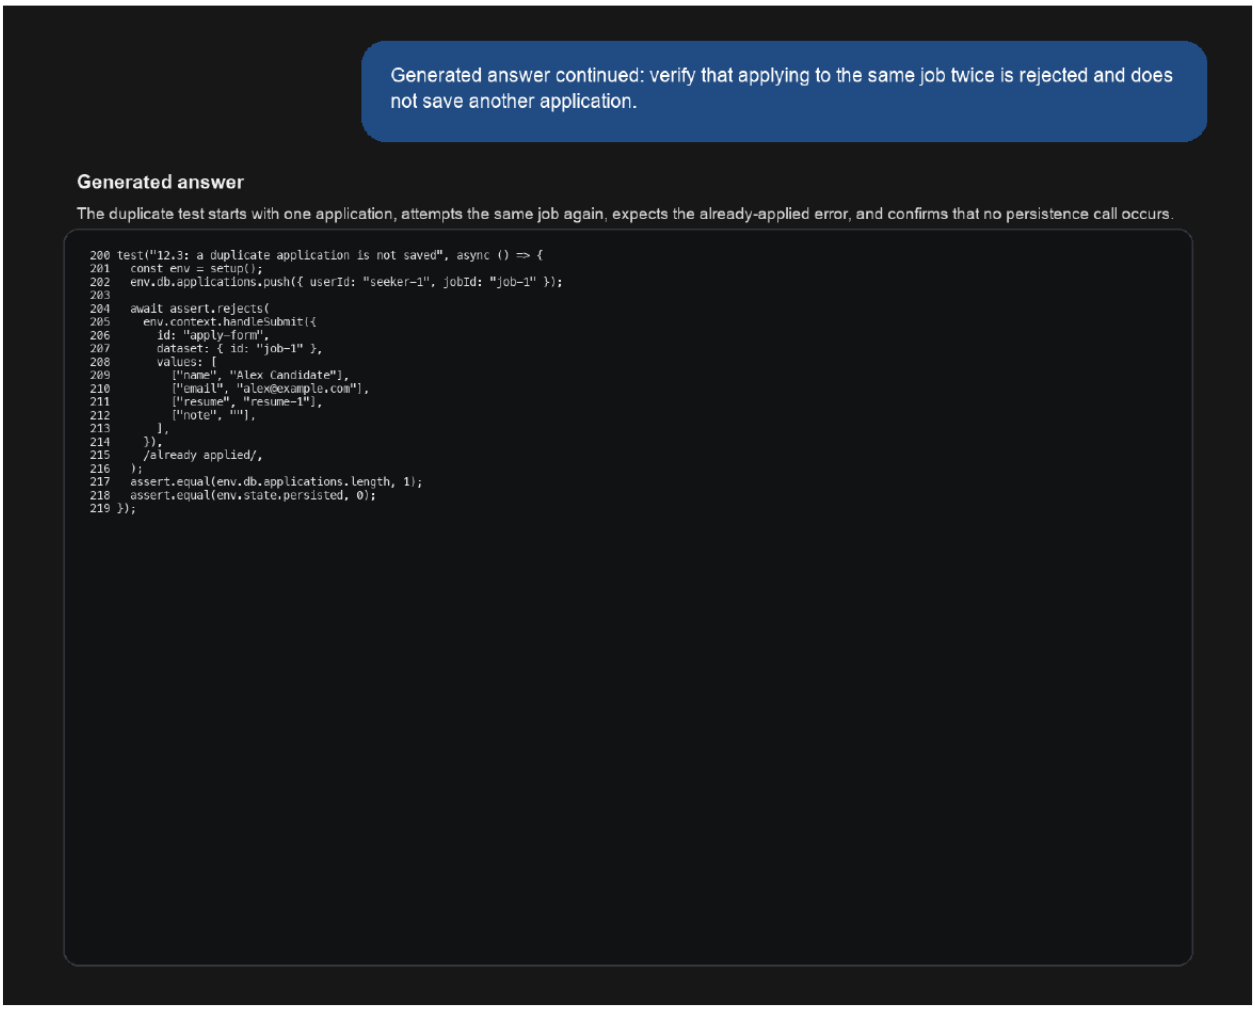

AI Suggested Content: The AI generated a duplicate-application test that expects the already-applied error and confirms that the application list is not changed.

Validation: The automated test passed and confirmed that no second application or persistence call was created.

Decision: Accepted.

Reflection: This test prevents accidental duplicate records and matches the restriction shown in the user interface.

Responsible Person: Sami Fares

NFR User Stories 1-3: Registration, Login, and Logout

Purpose of AI Use: To write simple non-functional requirements for secure and responsive account access.

Chat Link or Prompt/Response: See screenshot.

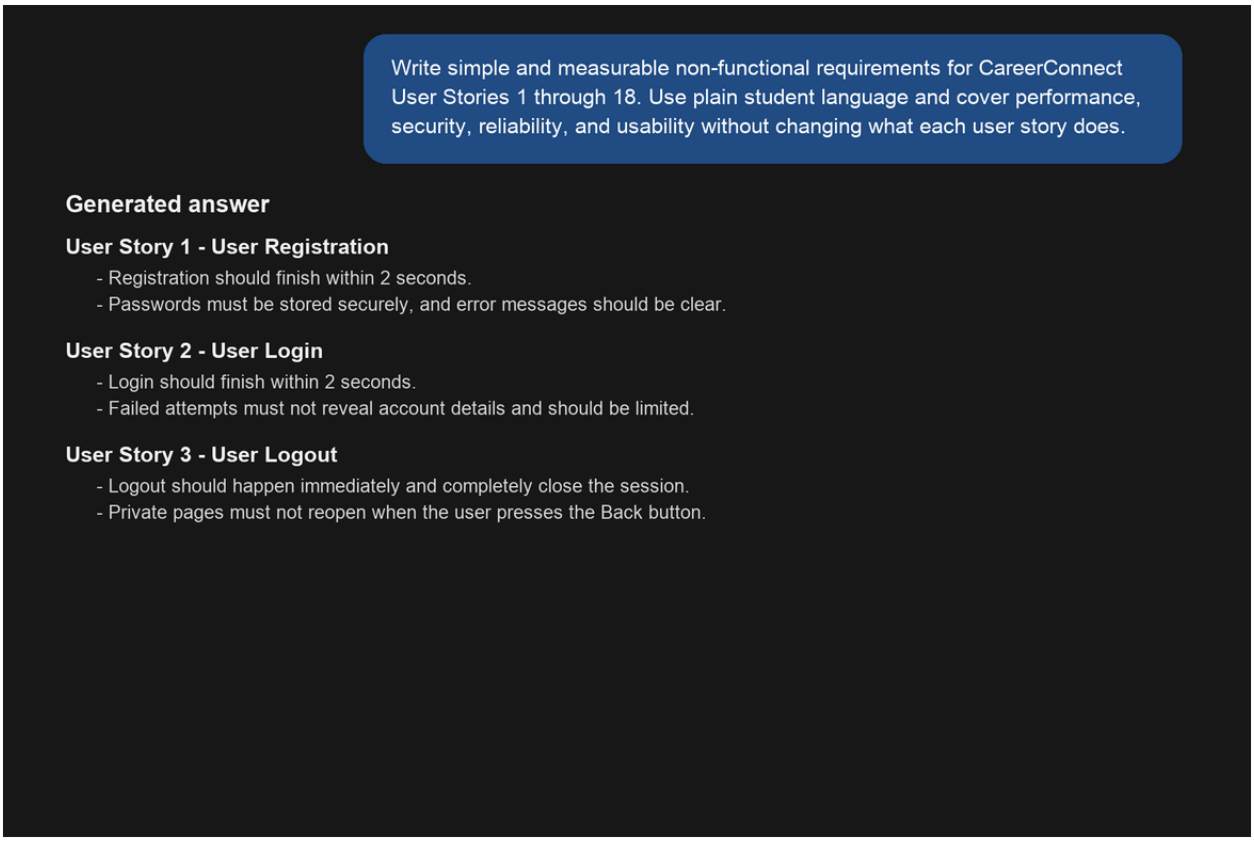

AI Suggested Content: The AI suggested measurable requirements covering performance, security, reliability, and usability for these user stories.

Validation: I checked that each item explains how well the feature should work, uses simple English, and does not add a new function.

Decision: Accepted after review.

Reflection: The NFRs make the expected quality of each feature clearer for development and testing.

Responsible Person: Sami Fares

NFR User Stories 4-6: Profiles and Resume Upload

Purpose of AI Use: To write simple non-functional requirements for usable profiles and protected resume uploads.

Chat Link or Prompt/Response: See screenshot.

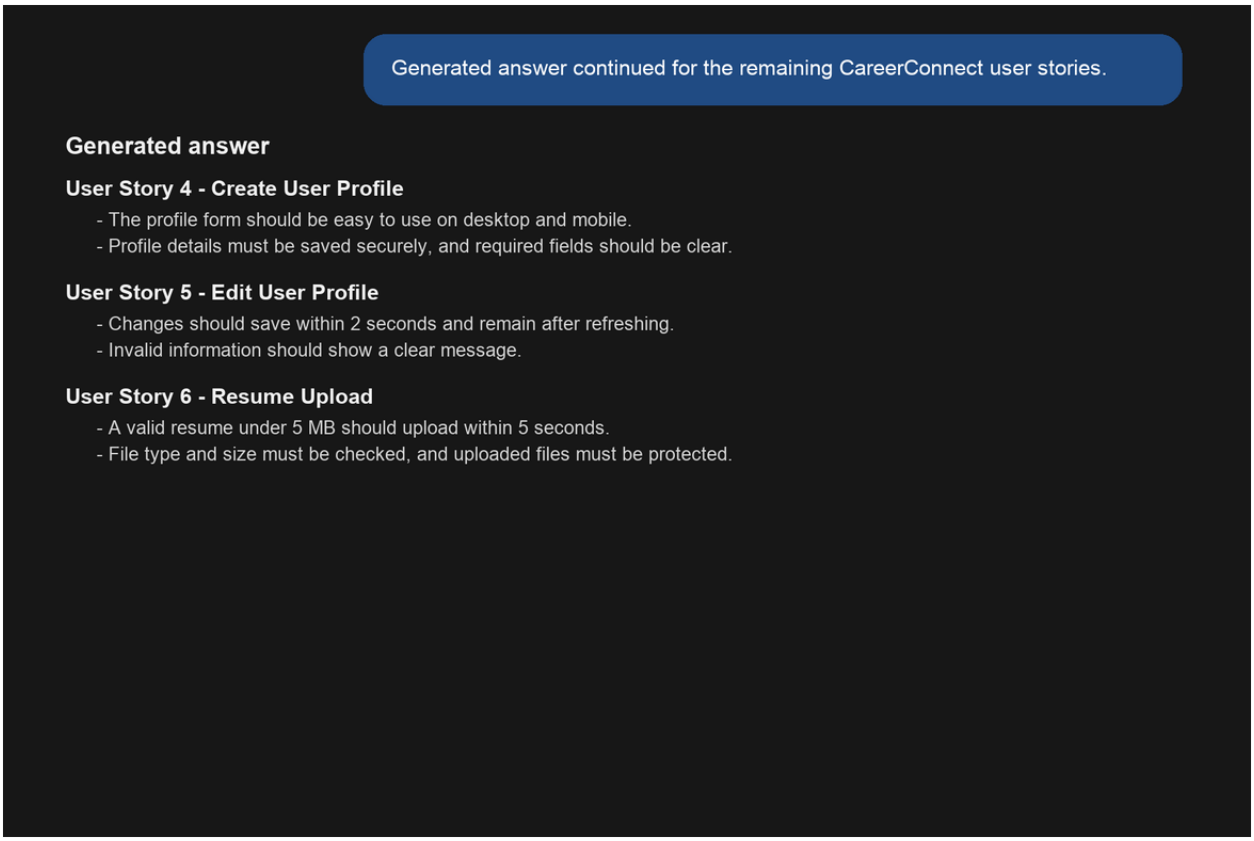

AI Suggested Content: The AI suggested measurable requirements covering performance, security, reliability, and usability for these user stories.

Validation: I checked that each item explains how well the feature should work, uses simple English, and does not add a new function.

Decision: Accepted after review.

Reflection: The NFRs make the expected quality of each feature clearer for development and testing.

Responsible Person: Sami Fares

NFR User Stories 7-9: Resume Management and Finding Jobs

Purpose of AI Use: To write simple non-functional requirements for reliable resume actions and fast job discovery.

Chat Link or Prompt/Response: See screenshot.

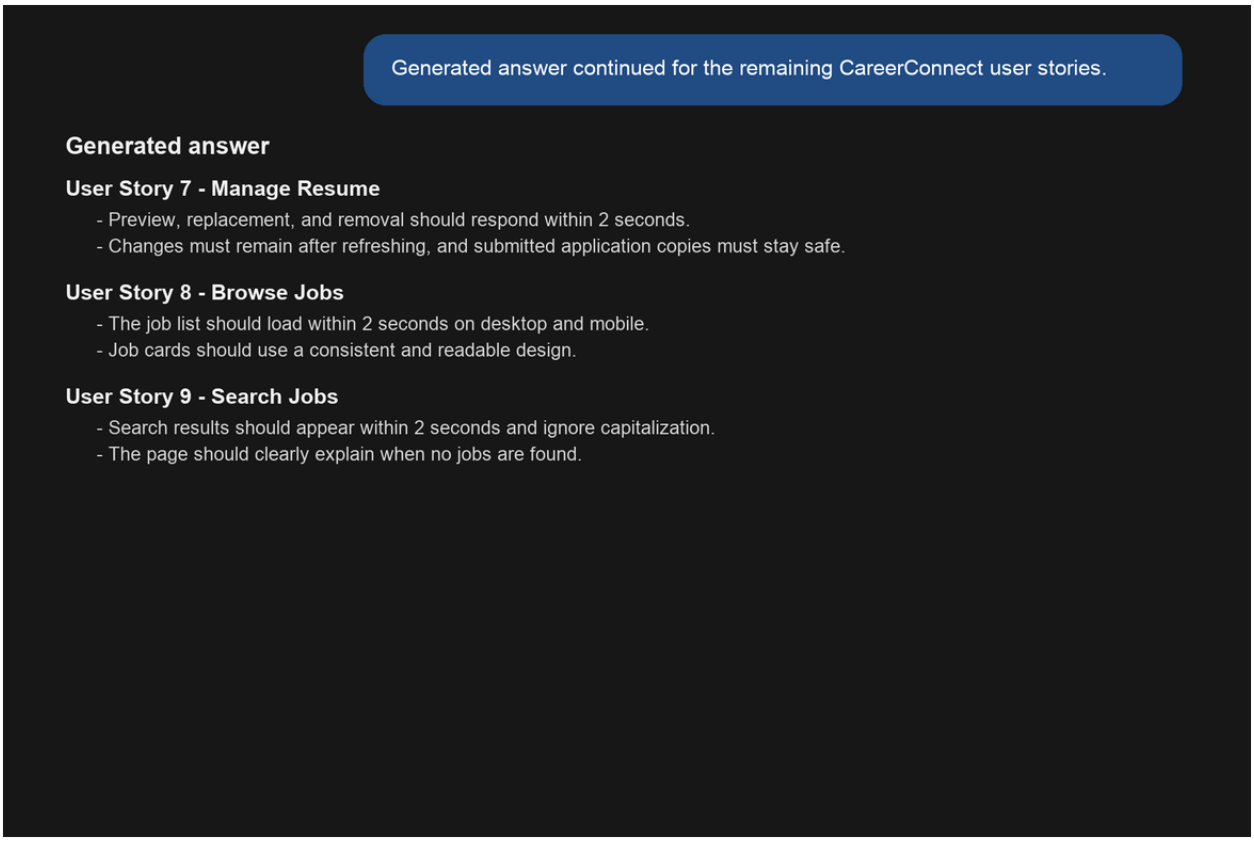

AI Suggested Content: The AI suggested measurable requirements covering performance, security, reliability, and usability for these user stories.

Validation: I checked that each item explains how well the feature should work, uses simple English, and does not add a new function.

Decision: Accepted after review.

Reflection: The NFRs make the expected quality of each feature clearer for development and testing.

Responsible Person: Sami Fares

NFR User Stories 10-12: Filtering, Job Details, and Applying

Purpose of AI Use: To write simple non-functional requirements for responsive job tools and secure applications.

Chat Link or Prompt/Response: See screenshot.

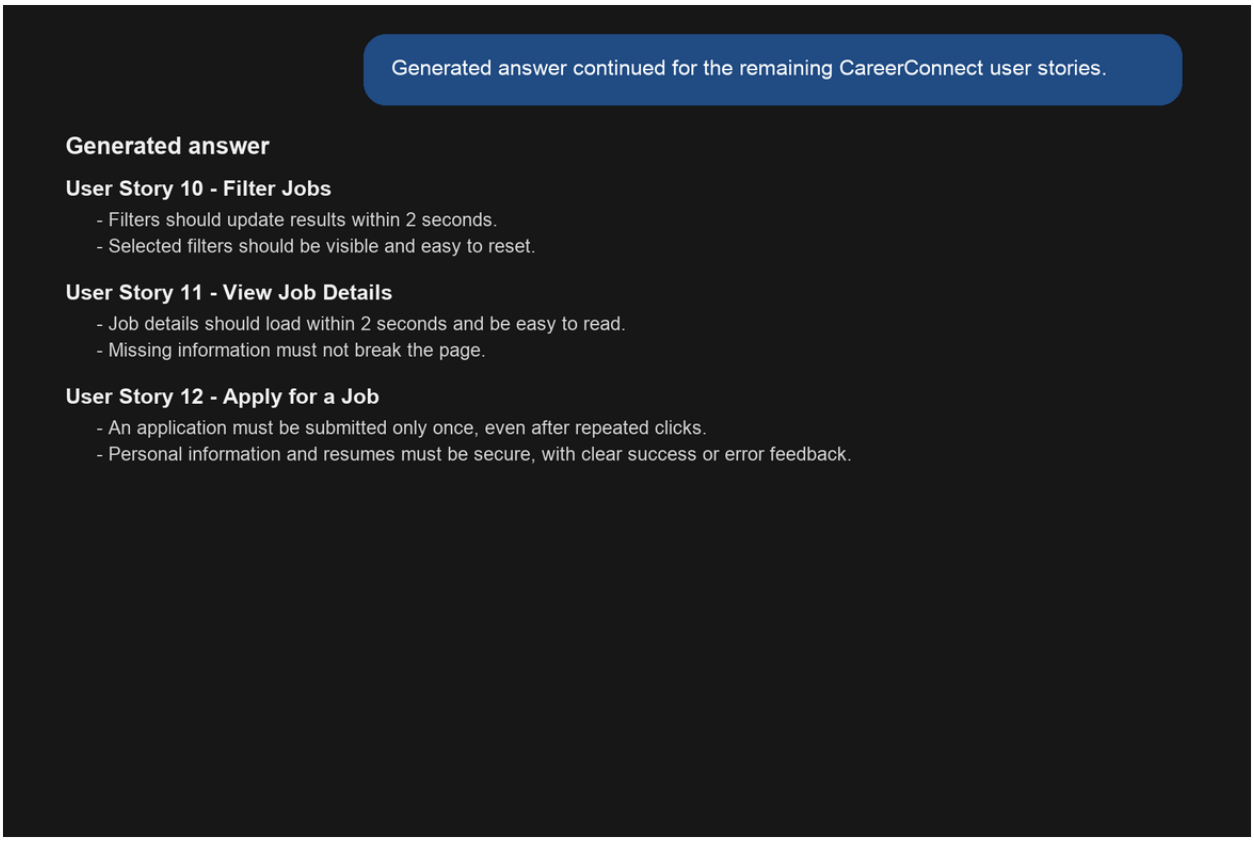

AI Suggested Content: The AI suggested measurable requirements covering performance, security, reliability, and usability for these user stories.

Validation: I checked that each item explains how well the feature should work, uses simple English, and does not add a new function.

Decision: Accepted after review.

Reflection: The NFRs make the expected quality of each feature clearer for development and testing.

Responsible Person: Sami Fares

NFR User Stories 13-15: Tracking and Recruiter Features

Purpose of AI Use: To write simple non-functional requirements for accurate tracking and authorized recruiter access.

Chat Link or Prompt/Response: See screenshot.

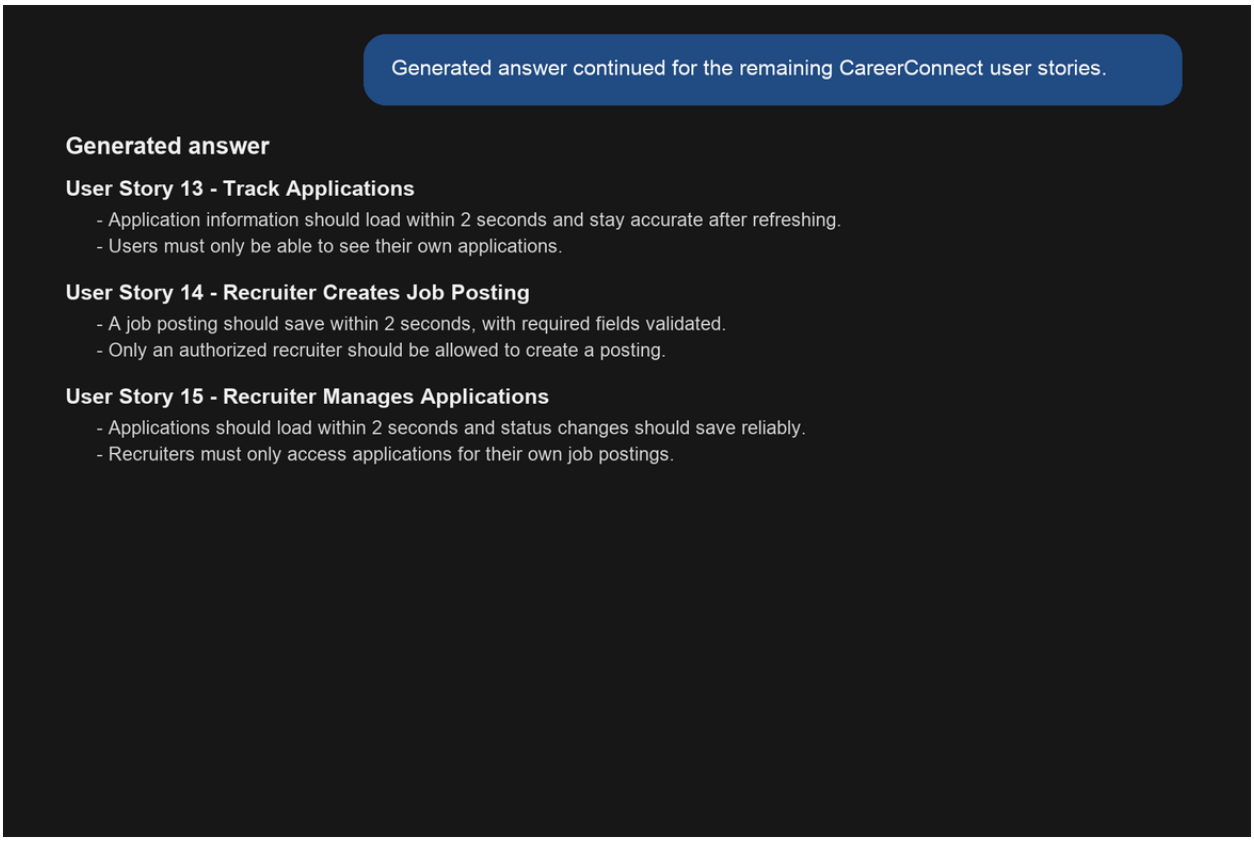

AI Suggested Content: The AI suggested measurable requirements covering performance, security, reliability, and usability for these user stories.

Validation: I checked that each item explains how well the feature should work, uses simple English, and does not add a new function.

Decision: Accepted after review.

Reflection: The NFRs make the expected quality of each feature clearer for development and testing.

Responsible Person: Sami Fares

NFR User Stories 16-18: Favourites, Notes, and Dashboard

Purpose of AI Use: To write simple non-functional requirements for persistent personal tools and accurate progress information.

Chat Link or Prompt/Response: See screenshot.

AI Suggested Content: The AI suggested measurable requirements covering performance, security, reliability, and usability for these user stories.

Validation: I checked that each item explains how well the feature should work, uses simple English, and does not add a new function.

Decision: Accepted after review.

Reflection: The NFRs make the expected quality of each feature clearer for development and testing.

Responsible Person: Sami Fares
