Ai Use Log-Matvei

User Stories 13–15: Review

Purpose of AI Use: To review User Stories 13, 14, and 15 and identify any improvements needed in their descriptions, criteria and tasks.

Chat Link or Prompt/Response: Can you review thth User Stories 13, 14, and 15 from the SOEN 341 CareerConnect project. Check if each user's story is clear, correctly written, realistic, and appropriate for the project requirements, also review the acceptance criteria and tasks for each story and suggest anything that could be improved. Do not add new features or change the scope of the project. Keep the recommendations simple and realistic please.

AI-Suggested Content: The AI found that User Stories 14 and 15 were already clear and appropriately structured. For User Story 13, it suggested adding the user role “As a job seeker” to follow the standard user story format, correcting a typo in the acceptance criteria, and making some of the acceptance criteria more consistent and specific.

Validation: The suggestions were compared with the existing GitHub user stories and the CareerConnect project requirements. The changes were reviewed to make sure that they are clear and are not changing the project's main scope.

Decision: Modified before use.

Reflection: The AI helped me identify small issues that were easy to overlook, especially the missing user role in User Story 13. The review also showed that User Stories 14 and 15 were already well structured and did not require major changes.

Responsible Person: Matvei Cladcov
